When and how it should be used?

What if the user clicks on a collapsed card while another card is open?

# The Barebones Of An Auction

The accordion is a graphical control element comprising a vertically stacked list of items, such as labels or thumbnails.

An accordion is similar in purpose to a tabbed interface, a list of items where exactly one item is expanded into a panel

What's an accordion?

How to choose an icon to indicate expansion?

Highlighting important details of a section and revealing more details upon a tap or click, if necessary.
