What's an accordion?

Tabbed interface

Tabbed interface

An accordion always contains the category title, an expanded and a collapsed state, an icon indicating expansion, and the spacing between them.

**The Accordion**

The accordion is a graphical control element comprising a vertically stacked list of items, such as labels or thumbnails. Each item can be "expanded" or "collapsed" to reveal the content associated with that item.

What if the user clicks on a collapsed card while another card is open?

How to choose an icon to indicate expansion?

A list of items where exactly one item is expanded into a panel
